

## Presto Pass

Effect: Two stacks of cards at 16 cards each. One stack is placed in a spectators pocket. Another spectator places the second stack in his pocket. Two cards leave one man's pocket and appears in the others.

Card Trick:

After the spectator counts off 32 cards from the deck, take the packet from him and hand it to someone else. As you do palm off four cards. The spectator deals the packet into 2 equal stacks. he places one stack in his pocket thinking it contains 16 cards. Pick up the other stack, add the four palmed cards and have him place the stack in his pocket. Command two cards to fly from one man to the other then have them count their cards. one spectator will have 14, and the other will have 18.
